Personal Skills

Computer Skills:

Revit

AutoCad

Sketchup

Adobe Illustrator & Photoshop

Microsoft word, excel, & powerpoint

Design Skills:

Hand & computer rendering

Hand sketching

Space planning

Model building

Work Experience

Maker Lab Assistant / On Campus Job

Abilene, TX

2016-2018

The maker lab is a space for students and people of the Abilene community to come and use a variety of tools or machines to create things. I help people use the machinery, tools, and different programs that go along with this process. Some of these include AutoCad, V-carve pro, sketchup, adobe illustrator, adobe photoshop, adobe indesign, CnC Router, epilog laser, and 3D printers.

Internship

Abilene, TX

Summer 2017

I had the luxury of interning at CADCO architects & engineers. It was a paid internship and my job involved as builds for a high school renovation in Eastland, TX. As builds consisted of me measuring every inch of the high school and recording these measurements so that I could later put them into AutoCad. I did a lot of AutoCad work as well. I put all the as builds measurements I recorded into AutoCad to develop the floor plan for the high school. In addition to as builds, I made minor changes to specific areas, on different floor plans, for various projects.

Education

Bachelors:

Interior Design / May 2018

Associates:

Architecture / May 2018

Abilene Christian Univeristy:

Abilene, TX

Department of Art & Design

Design Philosophy

Design Philosophy:

My Design philosophy is simple. I believe that design is all about challenging yourself to find, imagine, and create the next big thing. Doing this consistently will allow designers to push themselves passed their limits each time. Being able to harness this power of design ultimately shows the intricacy of the human mind. We are able to take our imaginations and manifest those thoughts into something tangible, into something real. The most powerful result of designing is the positive effect that it can have on countless users. This should be the ultimate goal of every designer. I myself will strive to affect as many people as I can in a positive way with good innovative design.

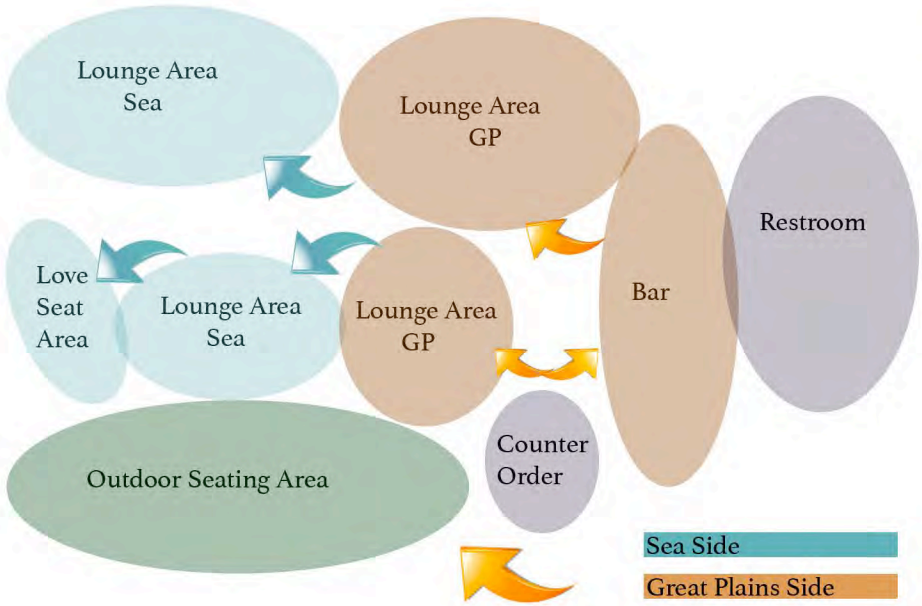

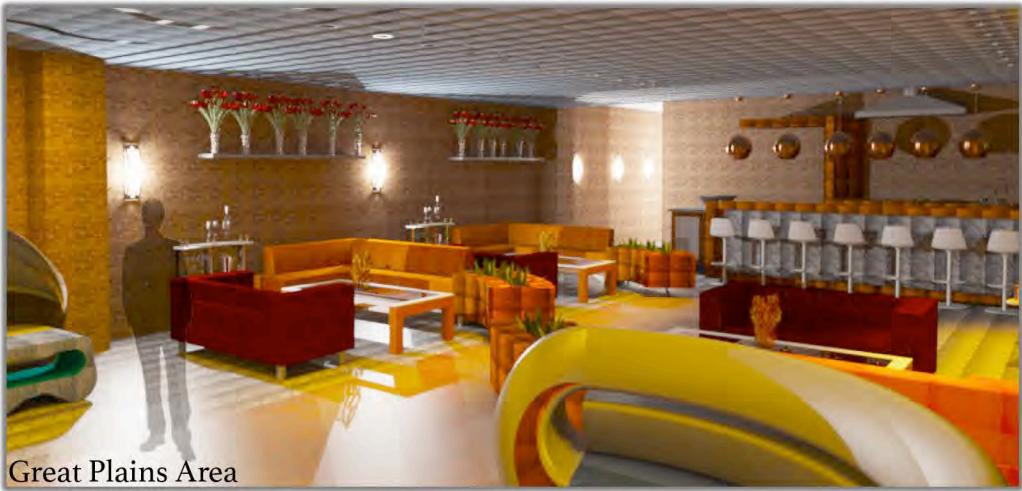

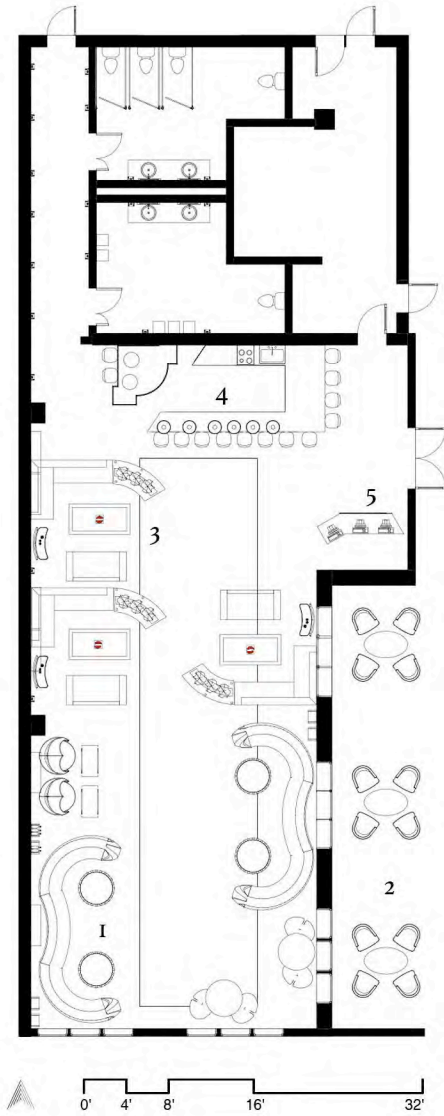

~ Byron Pyburn Jr.

P2S

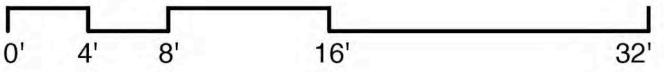

Plain 2 Sea is a seafood restaurant based in Wichita, Kansas. There is not much to see in the area and it is an odd place to have a seafood restaurant, but nonetheless this is where this unique place to eat is located.

The owners wanted something different for their restaurant. They wanted a place where people could not only go to eat, but vibe with one another as well. The design was based upon the Great Plains and the sea. The idea was to mend the breach between the two, which possess an obvious divide. With the two working together the restaurant is now vibe central.

- Floor Plan Key:
- 1. Sea Side Area
 - 2. Outdoor Eating Space
 - 3. Great Plains Area
 - 4. Bar Area
 - 5. Order Counter

We Think

We think is a brand specialist company in Dallas, TX. This company wanted a unique and open office for its employees as well as a space that had a relaxed feel and a good flow to it.

With that in mind the office was designed based upon the concepts of the butterfly effect and free flowing movement. The butterfly effect essentially states that one small thing can ultimately effect everything and free flowing movement is all about traveling freely without the feeling of being clustered. Together these concepts create a very detailed office space that has great fluidity throughout the. Ultimately this office compliments the company's design style very well.

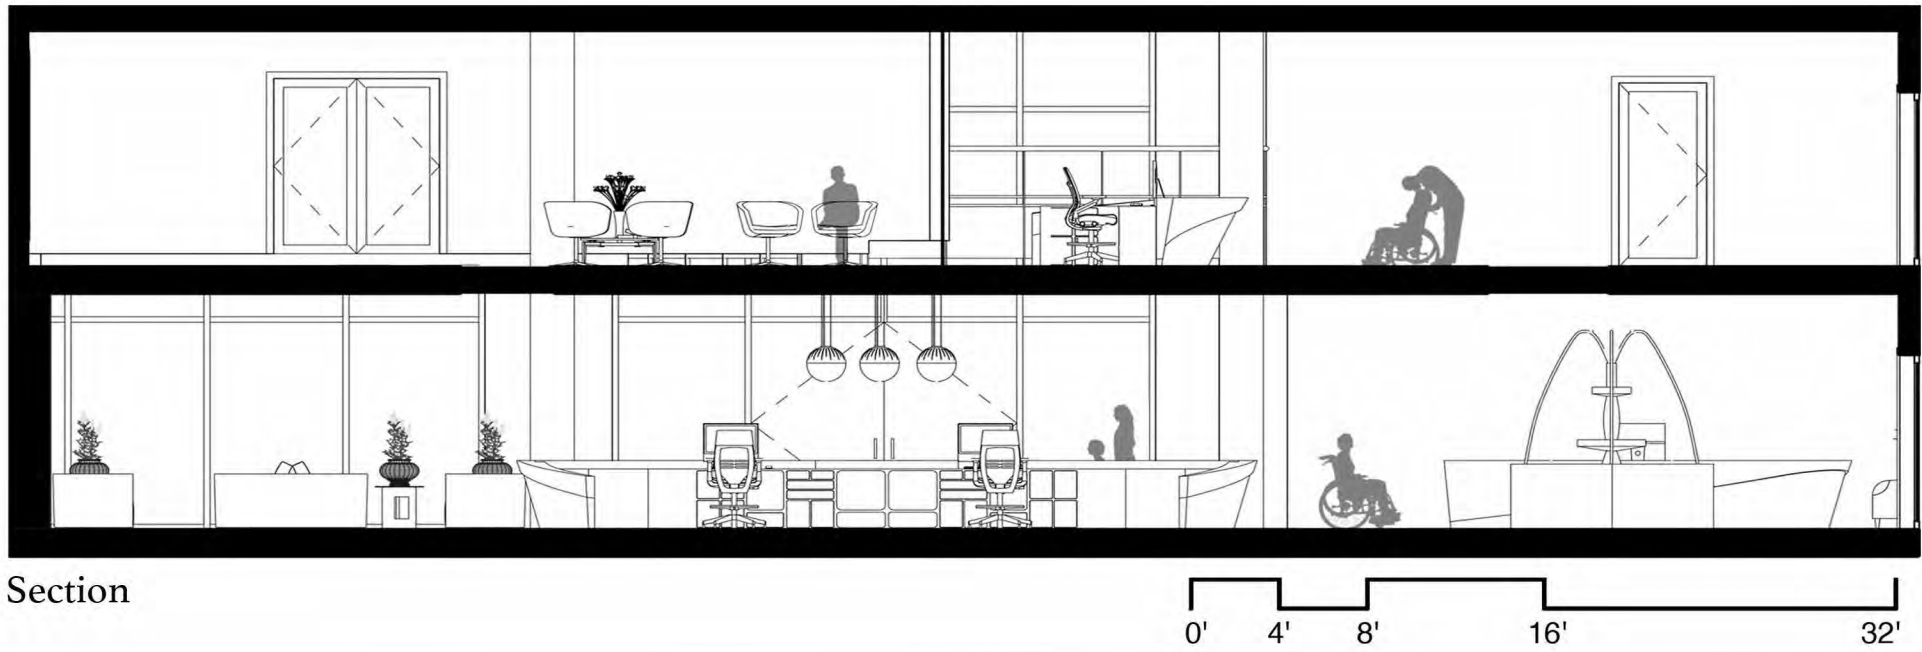

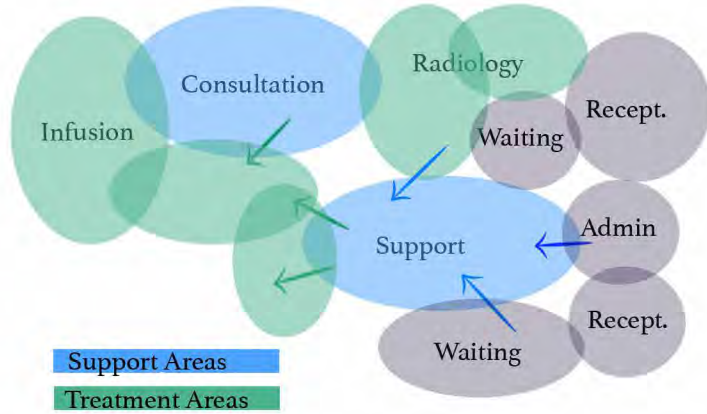

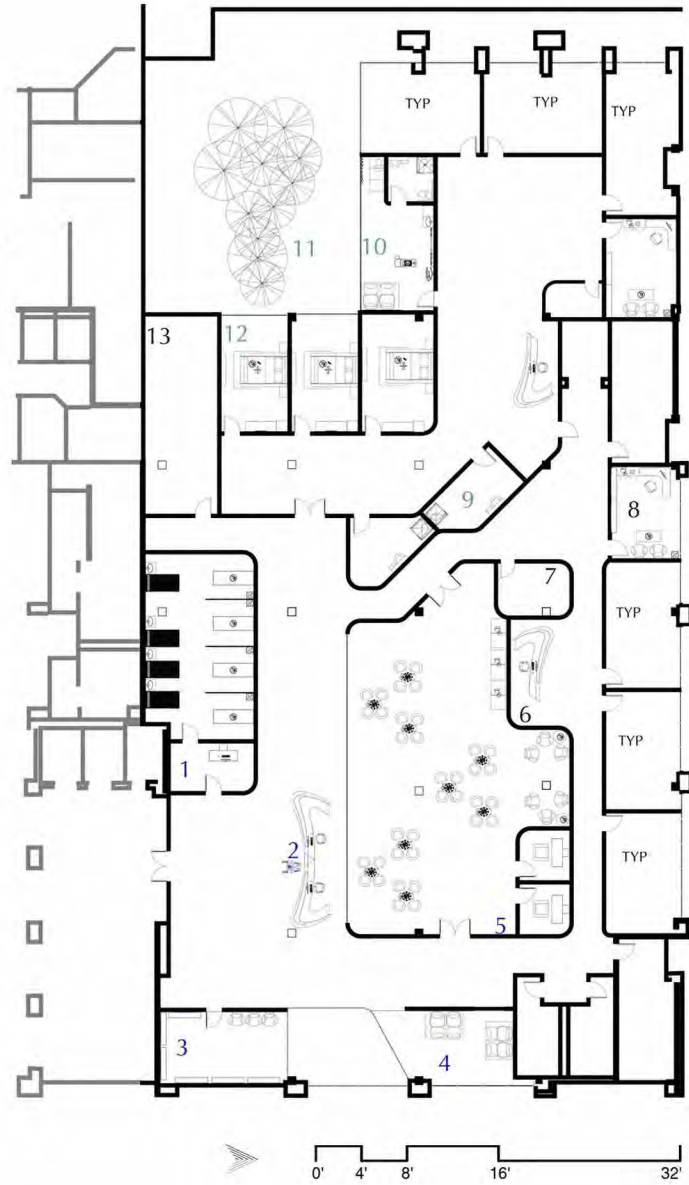

Hendrick Cancer Facility

In the renovation of the Cancer facility it was significant to bring nature inside to make the patients experience as real and relaxing as possible. This meant to use as many seemingly natural elements as possible, such as different types of wood, and good views to the beautiful garden.

The garden was very under used and in renovating the space the garden became a focal point. The most important aspect of cancer patients losing hope and eventually losing the battle to cancer is mental fatigue, but the biggest reducer of mental fatigue is this idea of hope infused with the incredible feeling nature evokes. These key elements were the heart of this project.

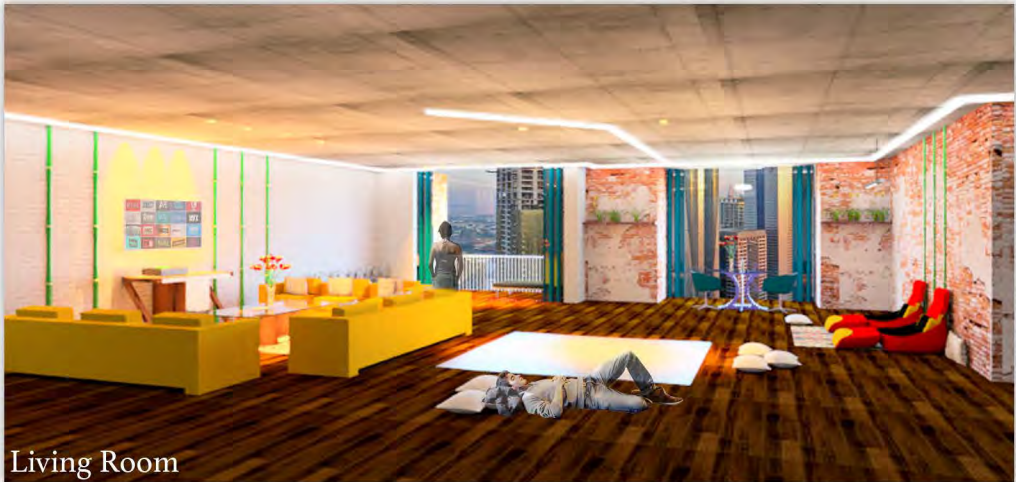

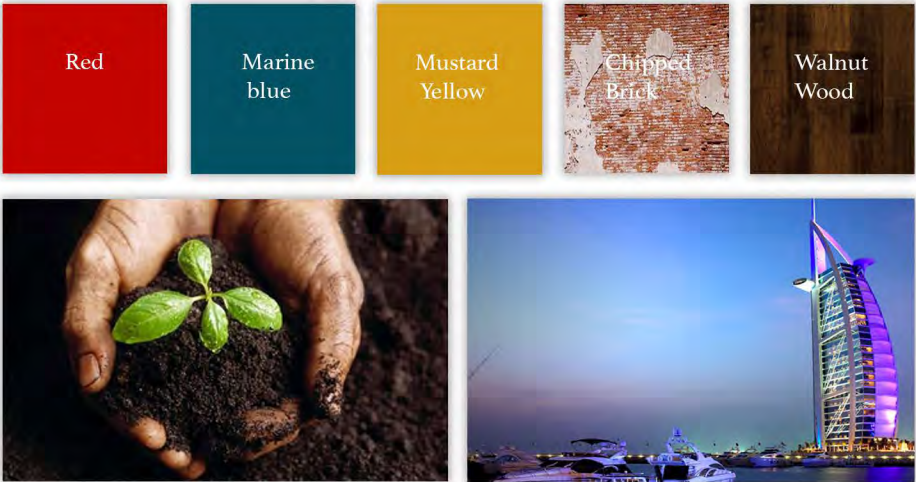

- Level 2
- 1. Massage Spa
 - 2. Reception
 - 3. Resource Library
 - 4. Meditation Chapel
 - 5. Community Hub
 - 6. Nurse's Station
 - 7. Laundry/Linen Closet
 - 8. Doctor's Office
 - 9. Family Restroom
 - 10. Patient's Room
 - 11. Garden
 - 12. Family Room
 - 13. Mechanical

Dubai

When you think of an apartment in Dubai you probably would expect a gold toilet or some expensive fabric that you have never heard of to sit on. This is more than likely what you would see, but does this constitute luxury? Does that constitute the next big thing?

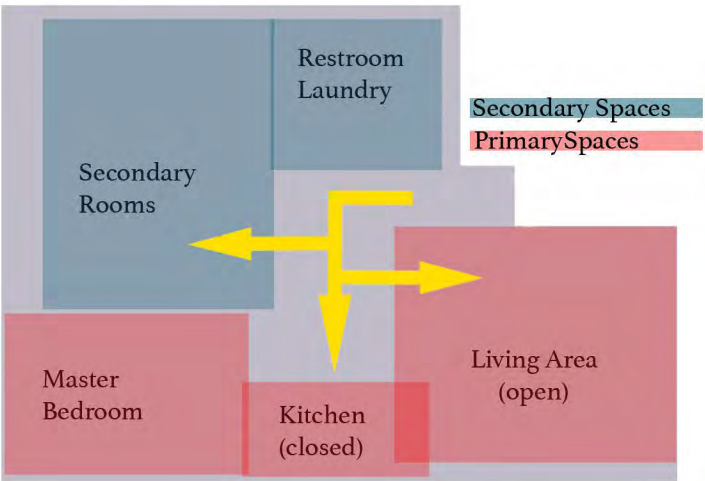

This project shows luxury from a simpler stand point. The concept for this project is all about bringing Dubai “down to earth”. Instead of golden toilets and expensive fabric, you get chipped brick walls and modern furniture. It indeed brings a different light to luxury. It says that the next big thing is not more technology less work, but actually creating a nice space that the occupant can freely use as they please.

Living Room

- Floor Plan Key
- 1. Master Bedroom
 - 2. Kitchen
 - 3. Living Room
 - 4. Bedroom 1
 - 5. Bedroom 2
 - 6. Bedroom 3
 - 7. Laundry
 - 8. Guest Bathroom

Furniture Design

Furniture should not only be functional and rational, but also should be unique. Each furniture piece represents a reflection of how you feel and how you would want the furniture to be used.

The chair reflects the idea of comfort as well as functionality. The lamp and the table take on the concept of the swan. The swan is a majestic animal that proves to be a unqiue as well as challenging concept for furniture. The curvaceous body of the swan was the main driving feature for the furniture pieces.

Ultimately, furniture is a statement of hard work and craftsmanship, while the unique syle and comfort add the true aesthetic.
